

CLOUD BASED INVENTORY MANAGEMENT

“ Allocadence has been instrumental in our mission to provide the most modern tools to our customers. ”

Rick M. - CEO of Complete Fulfillment

Allocadence is a cloud-based inventory management system tailored for institutional applications. We help organizations phase out manual inventory control processes wherever they are still in use by deploying a solution built from the ground up to capitalize on web and mobile technologies. The end result is a modernized process that is easier to execute, less time consuming and less prone to human error.

CLOUD BASED

No server hardware to maintain, no local software to manage. Allocadence servers are centrally located in a secure U.S. data center with 99.99% uptime and automatic data backup.

ELECTRONIC DOCUMENTATION

Eliminate the hassle of paper records, improve accuracy, and increase accountability by electronically documenting all inventory transactions and stock quantities.

CUSTOMIZABLE

Meet your organizational requirements with a customizable feature set and scalable architecture.

AUTOMATED ALERTS

Maintain ideal stock levels with automated reorder alerts.

UNLIMITED USERS

Have as many users as you need with individualized permissions based on role and authority level.

3RD PARTY INTEGRATIONS

Powerful integrations with 3rd party systems using Allocadence's API.

PROFESSIONAL ON-BOARDING

Personalized, professional on-boarding + project management + system testing included to ensure a successful launch.

- ▶ Intuitive
- ▶ Simple to use
- ▶ Feature rich

Inventory Management

Allocadence makes it easy to manage your inventory with customizable automation to match your internal processes. Throw away the spreadsheets and automatically track quantities in real time with alerts to notify you when it is time to reorder.

- Cycle Counting
- Par Levels
- Inventory Location
- Kitting

Purchasing & Receiving Process

Using a computer, tablet, mobile, or handheld device, Allocadence's purchase order and receiving processes ensure that incoming stock is handled accurately and efficiently. Inventory levels are updated based on the actual quantities received, with a helpful alert when there are variances from the supplier. You can even assign items to specific locations in your warehouse as you receive them, allowing for expedited cycle counts and order picking later in the process.

- Purchase Order Management
- Order Picking
- Flexible Receiving Options
- Customizable Put-Away Tracking

Order Management

Through our shipping partners like ShipWorks and ShipStation, Allocadence has the power of almost unlimited integration. Orders from all your online marketplaces will automatically sync to Allocadence and you can skip the hassle of a manual data import. And if you need to quickly see how order activity translates into your financial big picture, no problem - Allocadence also has built-in support for QuickBooks.
